

## Valve for Life Benchmarking Standards for TAVI.

1	Use of sedation with local anaesthesia in $\geq 95\%$ of cases.
2	Use of percutaneous approach in $\geq 95\%$ of cases.
3	Use of trans-femoral access in $\geq 90\%$ of cases.
4	Use of radial artery as second access site in $\geq 90\%$ of cases.
5	Minimalist approach to temporary pacing: pace on the LV wire (no TPW) in $\geq 90\%$ of cases.
6	Avoidance of any additional invasive lines (e.g. CVP, arterial lines, urinary catheterisation) wherever possible.
7	Standard trans-femoral TAVI list of 4 or more cases per day.
8	Same day admission in $\geq 50\%$ elective patients.
9	Use of level 1 beds only in $\geq 90\%$ of elective cases.
10	Discharge of $\geq 30\%$ of elective patients within 1 day of procedure.
11	Discharge of $\geq 75\%$ of elective patients within 2 days of procedure.
